

The U-Series

Scalability through versatility.

Why the U-Series?

The U-Series is our most affordable point series dedicated for users who refuse to compromise on performance and flexibility. Its exceptional versatility allows a single model to fulfil multiple roles, serving as a main PA top, stage monitor, or fill speaker, effectively delivering the functionality of several traditional loudspeaker types in one cost-effective package. This makes it the ideal choice for evolving needs, where adaptability and long-term value are paramount.

Models

The series includes various models (“i” denoting installation versions with enhanced mounting options):

- **U6(i)**: The most compact offering, equipped with a 6.5-inch woofer and 1.7-inch compression driver. Despite its size, it achieves up to 121.5 dB peak output. Closely related to the T6 but with a wedge-shaped enclosure for monitor use, the U6 suits space-constrained applications. An installation variant, the U6i, is available for fixed setups.
- **U26(i)**: The larger sibling to the U6, equipped with dual 6.5-inch woofers and a 1.7-inch compression driver. This configuration enhances low-end extension and full-range performance, making it well-suited for sports events, presentations, theatre, fills, or speech monitoring. The U26i installation version supports permanent mounting.
- **U8**: An 8-inch/1.7-inch full-range loudspeaker compact enough for discreet monitoring yet powerful for complete PA systems when paired with a subwoofer. It provides broader low-frequency coverage than smaller models, delivering versatile, high-output performance.
- **U10**: A favourite among sound engineers for its warm, full sound from a compact enclosure. Striking an ideal balance between size and capability, it excels as a PA top, infill, or monitor. Equipped with a 10-inch woofer and 1.75-inch compression driver, the U10 often operates effectively full-range, though subwoofer support from the B-Series is recommended for FOH applications.
- **U12**: Optimized for larger point-source PA systems, this model offers strong full-range characteristics with ample midrange headroom. Vocals and instruments project clearly, giving engineers freedom to shape the sound precisely, qualities that also make it an outstanding monitor. Budget-friendly for operations needing a single cabinet type across club PAs and monitor setups, it performs equally well

as front or out fills. Internally, it is equipped with a 12-inch woofer and 2.75-inch compression driver.

- **U15:** The series powerhouse, suited to high-output needs on constrained budgets. Its large 15-inch woofer ensures solid, reliable low-frequency reproduction, complemented by a 2.75-inch compression driver for clear high and middle tones. Excellent full-range capabilities allow standalone use in smaller PAs or powerful monitoring duties, with generous mid/low headroom benefiting instruments like bass guitars. Subwoofer pairing maximizes deep bass extension.

Presets and System Optimization

Each Quint Audio loudspeaker is designed, with dedicated DSP presets ensuring linear response for individual units or combinations. The U-Series is driven via P9 or P5 processors and compatible amplifiers. Factory presets deliver uniform, premium sound across configurations, with application-specific options, such as standard PA/top-sub or dedicated monitor modes, enabling quick optimization.

This universality supports diverse pairings, including B-Series subwoofers, with tailored presets preventing frequency imbalances and maintaining consistent linearity regardless of setup.

Application Areas

The Quint Audio U-Series consists of universal full-range loudspeakers designed for exceptional versatility across nearly any scenario, particularly common near- and mid-field PA applications. The same cabinet can serve as a main top, floor monitor, or fill speaker. Characterized by high efficiency, outstanding clarity, and excellent speech intelligibility, the series excels in live music, musical theatre, vocal/speech reinforcement, and DJ setups.

Developed for environments requiring flexible deployment, the U-Series is ideal for theatres, rental companies, playback performers, and DJs. These users benefit from speakers capable of multiple roles, from short-throw FOH tops to front/near fills or stage monitors, allowing diverse applications to be covered with a single loudspeaker type.

Key Benefits at a Glance

- **User-friendly operation:** Pre-programmed presets simplify setup while guaranteeing optimal sound, accessible to experienced engineers requiring fine control and rental operators seeking reliable, straightforward solutions.
- **Multipurpose deployment:** The same loudspeaker adapts effortlessly, from FOH top to infill or stage monitor, offering unmatched versatility.
- **Scalability:** Multi-role capability allows systems to grow with event demands, evolving from basic PA tops to full monitor arrays while remaining compatible with other Quint Audio components, such as shared B-Series subwoofers.

In summary, the Quint Audio U-Series provides a versatile, affordable range of loudspeakers that serve a wide array of applications reliably and efficiently.
