

# The C-Series

---

Our dedicated installation line

---

## WHY THE C-SERIES?

---

Professional audio installations demand more than loud and clear, they demand control. Control over where sound goes, how systems combine, and how quickly engineers can get results on site.

The C-Series is Quint Audio's dedicated installation line: a range of loudspeakers built from the ground up to work together. Shared technical alignment and factory-calibrated DSP presets mean any combination of models performs coherently, scales predictably, and sounds like one unified system, whether you're covering a pub, club, theatre, church or a stadium.

---

## APPLICATION AREAS

---

The C-Series is built for permanent installations where performance, reliability, and long-term consistency matter. Wherever audio needs to work night after night without compromise.

The range covers the full scope of installation challenges: from discreet near-field units that disappear into a ceiling, to high-power array modules that fill a ten-thousand-seat arena. Each model is engineered for its role, and every model is designed to combine cleanly with every other.

---

## MODELS

---

Eight models. One coherent system. Each C-Series loudspeaker is individually optimised for its application while sharing the technical DNA that makes the range work seamlessly together.

### C4

4"/1" Coaxial

Don't let the size fool you. This ultra-compact coaxial unit punches well above its weight in front fill, under-balcony, and discreet AV applications.

### C5

6.5"/1" Coaxial

Wide 100° conical dispersion from a coaxial driver makes the C5 the go-to for even coverage in restaurants, gyms, and meeting rooms. An integrated dual-mount bracket lets you go flush to the wall or ceiling with minimal effort.

**C6**

6.5"/1.75" Coaxial

The C6 with its 80° constant-directivity horn makes it the natural choice for under-balcony infill and long narrow spaces where controlled throw matters.

**C14**

15"/4"+2.5"

A point-source design built for high-end clubs and theatres. The large coaxial compression driver on a constant-directivity horn delivers clean vocals and authoritative low-mids at high SPL, without needing a subwoofer to complete the picture.

**C15**

15"/4"+2.5"

This 90°×20° constant-curvature cabinet delivers even coverage across clubs and theatres. Configurations from one to multiple units in a horizontal or vertical array.

**C30**2×15"/4"+2.5" Front  
2×15" ANC

Active Noise Cancelling woofers work together with the front-firing woofers to keep energy on the audience and away from the stage. The result is high output with dramatically reduced bleed, ideal for near- and mid-field in live music venues.

**C36**2×18"/2×15"/4×8"/  
2×4"+2.5"

The arrayable flagship. Active Directivity Control produces a precisely defined full-range 110° horizontal dispersion, giving engineers precise control over where the sound goes in the largest and most acoustically challenging venues.

**C42**

2x21"

Deep, high-pressure sub that extends well beyond what conventional 18" designs can reach. The C42 delivers the foundation that electronic music and large-scale events demand.

---

## PRESETS & SYSTEM OPTIMISATION

---

Every C-Series model ships with factory DSP-presets. Load the preset, run a quick check, and the system is performing linearly. No guesswork, no lengthy calibration sessions.

All presets are fully compatible with the Quint Audio P-series processors and A-series amplifiers. When you combine multiple models, the shared alignment means the crossover regions between units are already accounted for, consistency without compromise across the whole system.

## KEY BENEFITS

---

Five things that set the C-Series apart in real-world installation work:

### **System Compatibility**

Every C-Series model shares the same technical alignment as the rest of the Quint Audio range. Mix and match freely, across models and series, without losing coherence or tonal consistency.

### **Ready Out of the Box**

Factory DSP-presets mean the system performs linearly from the moment you switch it on. Fine-tune if you want to, but you rarely need to.

### **Straightforward Setup**

Designed so that engineers are able to commission any system quickly and confidently. No proprietary software, no complex calibration routines.

### **Coverage for Every Space**

From compact coaxials for intimate rooms to large-format arrays for stadiums, and everything in between. One system family that scales with the brief.

### **ANC & ADC Technology**

Active Noise Cancelling and Active Directivity Control manage energy in difficult acoustic environments, not just specifications on a data sheet.

---

The C-Series is built on one principle: a sound system should work the way the engineer expects it to. Reliable, predictable, and consistent, from the first installation to the hundredth.
