

The T-Series

Compact point source tops delivering substantial output

WHY THE T-SERIES?

Compact top cabinets that scale effortlessly, from a single full-range speaker for smaller setups to a complete high-output PA system by adding subwoofers.

All T-Series models support full-range operation and deliver natural, highly dynamic sound reproduction right out of the box. The range covers everything from the ultra-compact T4 fill speaker to the flagship T24 bi-amped top, with options for every power requirement and deployment scenario between them.

Paired with B- or L-series subwoofers and driven by P-series processors and A-Series amplifiers, the T-series forms a coherent, scalable system with factory-aligned presets that maintain consistent tonal balance across any configuration.

APPLICATION AREAS

The T-Series is built for touring at small to medium-sized events, where natural, highly dynamic reproduction is paramount, live music, theatre, speech reinforcement, and demanding mixed-use scenarios. Every model supports multiple deployment modes: pole-mounted on stands, flown from truss, or installed via wall and ceiling brackets.

A range of accessories, including elegant fixed installation frames, supports permanent deployment without compromising the cabinets' touring credentials. When paired with powerful subwoofers from the Quint Audio B- or L-series, the T-series scales to high-output PA configurations that meet any event's requirements.

MODELS

Five models spanning ultra-compact fill speaker to flagship bi-amped top. Each delivers full-range performance independently and integrates seamlessly with Quint Audio subwoofers for extended output.

T4

4"/1" Coaxial

The most compact model in the T-Series, ultra-small, ultra-versatile. A 4"/1" coaxial driver delivers high-fidelity audio from a tiny enclosure, making the T4 ideal as a fill, stage front, under-balcony, or discreet monitor in live and broadcast settings.

T12

12"/5"AMT

The high-definition option in the T-Series. A 12" woofer pairs with an advanced 5" neodymium Air Motion Transformer (AMT) for precise mid- and high-frequency reproduction, delivering articulate mids, extended highs, and surprisingly rich bass for its size. Equally capable as a standalone system or in small to medium PA applications with subwoofer support.

T15

15"/3.5"

The T-Series model most oriented toward independent, standalone operation. A 15" woofer provides robust low-end extension that allows full-range use in many scenarios without subwoofer support, while the 3.5" compression driver ensures clear and present mids and highs. The go-to option when maximum full-range performance from a single enclosure is the priority.

T16

2x8"/3.5"

A compact high-power top engineered to perform at its best when paired with subwoofers. Wider dispersion than the T12 or T15 makes the T16 effective across larger coverage areas. Comparable maximum SPL to the T15, with rigging compatibility shared with the T24 for consistent system integration.

T24

Dual 12" / 4"+2.5"
Coaxial · Bi-amped

The flagship. Dual 12" woofers and a coaxial 4"/2.5" compression driver in a three-way bi-amped design deliver very high output from a relatively compact enclosure. Integrated handles and a quick-lock rigging system make flying or stacking straightforward. Designed to be used with a subwoofer for full low-end impact.

PRESETS & SYSTEM OPTIMISATION

Every T-Series loudspeaker is designed to be used with custom DSP presets provided for optimal linearity and component matching. Used with P-series processors and A-series amplifiers, these presets deliver balanced, uniform sound from the outset, no on-site tuning required.

Protective limiting is built into all presets, safeguarding drivers at high levels while guaranteeing maximum performance. Application-specific presets cover standalone full-range operation, top-sub configurations, and dedicated monitor modes.

KEY BENEFITS

Five reasons the T-Series is the right top cabinet for demanding live applications:

Standalone or scalable

Every T-Series model operates full-range out of the box. Add subwoofers from the B- or L-Series to scale output and extend bass reach, the system grows with the requirement.

Ecosystem compatibility

Full interoperability with Quint Audio B- and L-Series subwoofers, P-Series processors, and A-Series amplifiers. Tailored crossover presets ensure balanced, coherent performance in any combination.

Deployment flexibility

Pole-mount on stands, fly from truss, or install via U-brackets and elegant fixed mounting frames. Every model supports multiple deployment modes with a consistent accessory system.

Driver protection built in

DSP presets include precision limiting to prevent driver damage at high SPL, maximum performance, maximum safety, regardless of the operator.

The T-Series is built for engineers and rental operators who need a top cabinet that performs reliably at any scale, standalone for smaller shows, or as part of a complete high-output Quint Audio system for larger events.
