

PRODUCT WHITEPAPER

# The U-Series

---

Scalability through versatility

---

## WHY THE U-SERIES?

---

One loudspeaker. Multiple roles. The U-Series is built for users who need flexibility without compromising on performance, at a price point that makes scalability practical.

A single U-Series cabinet can serve as a main PA top, stage monitor, or fill speaker, effectively replacing multiple single-purpose loudspeaker types in one cost-effective package. High efficiency, outstanding clarity, and excellent speech intelligibility make the range equally effective in live music, theatre, speech reinforcement, and DJ applications.

Available in standard and installation ('i') variants across multiple sizes, the U-Series scales from compact single-cabinet setups to full multi-zone systems, all within the Quint Audio ecosystem.

---

## APPLICATION AREAS

---

The U-Series is designed for near- and mid-field PA applications where deployment flexibility is as important as audio quality. Theatres, rental companies, playback performers, and DJs all benefit from a cabinet that transitions effortlessly from FOH top to front fill to stage monitor, without changing the hardware.

Paired with B-Series subwoofers and driven by P-Series processors, the U-Series forms a complete, coherent system. Tailored crossover presets ensure frequency-balanced performance whether the cabinets are used as mains, fills, or monitors, across any venue size.

---

## MODELS

---

Seven models, standard and installation variants across four sizes, plus the U8 for applications between the U6 and U10. Every model shares the same multi-role design philosophy.

### U6

6.5" / 1.75"

The compact entry in the U-Series, big sound from a small footprint. A 6.5" woofer and 1.75" compression driver in a wedge-shaped enclosure suit space-constrained PA, monitor, and fill applications. The same driver configuration as the T6 in a more versatile housing, delivering up to 121.5 dB peak output.

## U6i

6.5"/1.75"

The installation variant of the U6, featuring enhanced mounting options for permanent fixed setups. All the acoustic performance of the U6 in a cabinet optimised for discreet, long-term deployment in theatres, hospitality venues, and corporate environments.

## U26

2x6.5"/1.75"

The larger sibling to the U6. Dual 6.5" woofers extend low-end reach and improve full-range performance, making the U26 well-suited to sports events, presentations, theatre sound, fill coverage, and speech monitoring.

## U26i

2x6.5"/1.75"

The installation variant of the U26, with enhanced mounting provisions for permanent setups. The same dual-woofer full-range performance as the U26, optimised for fixed deployment (rotatable horn) in venues where reliability and discrete integration are primary requirements.

## U8

8"/1.75"

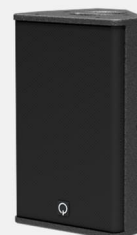

Compact enough for discreet monitoring, capable enough for a complete PA system when paired with a subwoofer. The U8 provides more low-frequency output than the U6 while maintaining a compact footprint, a versatile, high-output solution for applications between the U6 and U10.

## U10

10"/1.75"

A favourite among sound engineers for its warm, full character from a compact enclosure. The U10 strikes an ideal balance between size and capability, equally at home as a PA top, infill, or stage monitor. Often used full-range, though B-Series subwoofer support is recommended for FOH applications that require extended low-end.

## U12

12"/12.5"

Optimised for larger point-source PA systems, the U12 offers strong full-range characteristics with ample midrange headroom. Vocals and instruments project with clarity and presence, giving engineers the freedom to shape the sound precisely. Budget-friendly for operations needing a single cabinet type across club PA and monitor setups.

## U15

15"/12.5"

The series powerhouse. A 15" woofer delivers solid, reliable low-frequency reproduction; the 2.5" compression driver ensures clear mids and highs. Generous mid/low headroom benefits instruments like bass guitar in monitor applications. Excellent full-range performance for standalone smaller PA systems, with subwoofer pairing available for extended bass reach.

## PRESETS & SYSTEM OPTIMISATION

Every U-Series loudspeaker is to be used with dedicated DSP presets ensuring linear response in any configuration, standalone or in combination with B-Series subwoofers.

Application-specific presets, standard PA/top-sub mode, dedicated monitor mode, enable quick optimisation for the task at hand. This approach prevents frequency imbalances when mixing cabinet types and maintains consistent linearity regardless of the system size or configuration.

## KEY BENEFITS

Five reasons the U-Series is the right choice for flexible professional audio:

### One cabinet, many roles

The same U-Series cabinet adapts from FOH main top to floor monitor to fill speaker without modification. One investment covers multiple deployment scenarios.

### Scalable systems

Start with a basic PA top and expand, adding monitors, fills, or subwoofers, while maintaining full compatibility with the rest of the Quint Audio range and consistent system behaviour.

**Ready out of the box**

Application-specific DSP presets (PA/top-sub, monitor mode) load via P9 or P5 processors. Optimal settings in seconds, for experienced engineers and rental operators alike.

**Broad application range**

Live music, musical theatre, speech reinforcement, DJ setups, sports events, the U-Series handles them all with the same high efficiency, outstanding clarity, and speech intelligibility.

**Ecosystem integration**

Designed to pair seamlessly with B-Series subwoofers and P-Series processors. Tailored crossover presets prevent frequency imbalances and maintain linear response across any combination.

The U-Series delivers exactly what its name implies: universal applicability, without sacrificing the performance standards or ecosystem integration that define the Quint Audio range.
